: The Loufangzi site, located in the eastern Gansu province, is an open-air site dated at the middle paleolithic. In 2018, excavations were carried out on the lower part of the cultural layer (Layer 14 and 15) of the Loufangzi site, and plenty of artifacts and animal bones were discovered in 16 m². Lithic raw materials were made of gravel from river nearby, which were

of tools were retouched by hard-hammer. The typological and technological characteristics of

: Mu ZX, Chen GK, Du SS, et al. A preliminary report of the 2018 excavation at the Loufangzi site in Huan county, Gansu province[J]. Acta Anthropologica Sinica, 2022, 41(1): 121-134

artifacts from the lower cultural layer of the Loufangzi site belonged to the small tool technology. Combined with the stratum accumulation and related pollen analysis, we preliminarily think that the age of lower cultural layer of the Loufangzi site is equivalent to MIS5.
